# FLASH ALERT

## “Meltdown and Spectre” Vulnerabilities

**2018/01/04 0715 PST**

GSL is aware of recently disclosed statements regarding “Meltdown and Spectre” vulnerabilities on modern computer processors, including Intel Architectures. GSL uses Intel microprocessors in the IntelliCab system and thus may be vulnerable if an intrusion were to occur.

GSL IntelliCab Enterprise and Retail Systems are each protected by a networking firewall which restricts possible intrusion attempts from Customer networks. Never the less, GSL is moving with urgency to validate Microsoft issued patches for these vulnerabilities against the IntelliCab systems.

GSL will be testing Microsoft (and Intel) Patches in our labs as they become available. GSL will be contacting each customer to schedule system patching.

This bulletin will be updated as we have new information to share on the availability of patches for GSL Customers.

Updated information will be available on [www.gslcorp.com](http://www.gslcorp.com)
